

TINY

Curiosity: The iron present in our blood was formed billions of years ago in the core of stars like the Sun, as well as the 99.9% of matter that makes up our solar system.

For thousands of years the Sun has been a cult object for many cultures.

Even the moon needs the sun to be able to shine at night!

It is our great ally to overcome the cold and darkness that, at times, we are so afraid of.

Challenge: take a calendar and count the days until the day with the most hours of light throughout the year.
